Master’s in Computer Science

Why

After a decade of architecting products at scale, I am investing in a deeper understanding of frontier systems by pursuing a master’s degree with a focus on ML.

I will still leverage my expertise at app development to publish great experiences for people, but I think the ability to reason about underlying frontier ML systems, and to tune them at scale, will be critical in the 2030s to build really great experiences. Also, it just sounds fun.

Timeline

January 2026
Retire with honor from Staff Software Engineer position at Ambience

March 2026
Begin Stanford NDO classes (Probability for Computer Scientists, Artificial Intelligence)

April 2026
Assemble graduate school applications with letters of recommendation from core mentors

November 2026
Submit applications to graduate school programs

August 2027
Begin full-time, in-person master’s program in Computer Science, focused on frontier ML
